

PHASE 1: Database Setup and User Management

=====

OBJECTIVE:

Learn how to create a SQLite database and perform basic user operations.

INSTRUCTIONS:

1. Run the seeder script to create your database:
2. Open your terminal/command prompt
3. Navigate to the project directory
4. Run: `python seed_database.py`
5. You should see a success message and a new file called 'coaching_app.db'
6. Review the provided files:
7. `userService.py`: Contains functions to interact with the users table
8. `cli.py`: A simple command-line menu for the application
9. Run the application:
10. Run: `python cli.py`
11. Use the menu to:
 - Add a new user
 - Get a user by email
 - Exit the program
12. Explore and experiment:

13. Try adding some users
14. Try finding users by their email
15. Look at the code to understand how it works

CHALLENGE (Optional): - Can you add a new menu option to list all users? - Can you add validation to check if an email already exists?
